

SAFE AND EFFICIENT

The high level of safety and efficiency in today's drilling operations around the world requires special attention to work areas and risk exposures.

Rigtools Clamp improves safety and efficiency when handling lifting subs on bottom hole assemblies.

HIGHLIGHTS

- Time saving and more safe when installing and removing lift subs in vertical and especially horizontal position.
- No loose bolts or shackles required.
- No need of lifting slings.
- Less risk of hanging up in threads when removing lifting subs in vertical position.
- **Rigtools Clamp** is clamped directly on the lifting sub when installing or removing them from BHA items.

SPECIFICATION

- **Rigtools Clamp** is made of stainless steel.
- Weight: 6 kg without lifting gear.
- Length: 450 mm
- The Clamp is delivered with lifting chains and full certification for offshore use.
- Clamp standard sizes:

3½"

4"

5"

5 ½"

5 ¾"

6 ⅝"

7"

CUSTOMER STATEMENT

The Rigtools Clamps make handling of our lifting subs safer and easier, no more wrapping slings round subs, quick and easy installation of the clamp either vertically or horizontally, no shackles bolts or safety pins to worry about, the subs are held securely and rotate easily so installing into collars etc. made safer with little chance of nipped or crushed fingers when using chain tongs. We have a 5½" and 5" Rigtools Clamp, two of the best additions to drill floor safety and efficiency we have had.

Rigtools clamp down on pinched fingers !

The best possible solution when handling subs.

User statements

- *I believe these clamps are the best tools I have seen offshore for safety and operational performance.*
- *A good product that reduced the risk to the personnel working on building BHA operations.*
- *Crews highly commend this product. We have tried two other designs with no success and crews were not happy to use them. I regret we did not have this product years ago.*
